Vento System Sol and TI.TO Modules

The SOL module is a multi-company management system and on-line control for a gaming machines that allows electronic information to be obtained through a standard communication protocol or mechanical counters from those that do not.

- Use of standard protocols.
- Compatibility with all gaming machines.
- Easy to use.
- Support of multiple rooms.
- Quick start-up.
- Active monitoring of machines.

- Graphic reports on the status of the machines installed in the room.

The data is processed and stored by a central server that communicates by links with the local servers of each room. The information can be accessed through the Internet, after user identification through a well-defined access policy.

The TiTo module provides the following features:

- Elimination of tokens, treasure and personnel.
- Elimination of manual and completed payments, along with your vouchers.
- Control over losses prevents ant theft.
- Increase in collection due to the machine.
- Simplicity in authorship, you should only have a bills and ticket counter. Online collection all the time.
